

## ✓ Drop Over Shelf

The Troax Drop Over shelf is suitable for all types of pallet racking. Drop Over mesh shelves fit tightly onto existing pallet racking due to the panel weight and unique profile design. The panels simply drop onto the racking beams and can be easily lifted and moved sideways.

The mesh design is ideal for insurance purposes as water from sprinkler systems can easily penetrate through the shelves and racking. It also means that dust does not build up on the panels and natural light can filter through to reduce the need for additional lighting. Goods slide easily onto the shelves as the mesh wires meet on the underside of the panel, creating a smooth, flat surface.

The shelves are made in order to fit specific depths and lengths (front to back) in the racking and in line with required loading capacities. The thickness of the mesh wire and the bearings are custom designed to cope with various loads.
